

998 MECHANICAL ACCESSOIRES

TILTABLE BASE FOR ROOF-TOP

Code : **9980020**

Model : **TA-001**

Description

Masts for antennas. Several sections of the mast can be added to extend its length. Secured to the roof by means of a special mast base for roof-tiles, to the wall by means of two brackets or to the chimney by means of a special clamp.

Applications

Used as a support for the installation of terrestrial TV and radio antennas.

Characteristics

Made from round galvanised iron tube. The different sections of the mast are assembled by inserting the upper part of the mast into the lower part of the other section, securing them with an M6 screw which passes through the tubes.
