BED UNIT WITH 3 BUTTONS & CONNECTOR

Code : **9410091**

Model : **LLC-204**

Description
Room peripheral with a connector for pear-type push-buttons (LLC-21x) and three further buttons: a nurse call button with a red LED, a nurse presence button with a green LED and an assistant presence button with a yellow LED. It allows to place a call from the pear-type push-button (LLC-21x) or from the red button in the peripheral. Once the call has been placed, the red LED makes it easy to identify the bed that originated the call, as well as the status of the call, while the green and yellow LEDs informs about the presence of the nurse or the assistant in the room, respectively. This presence is turned on and off with the green and yellow presence buttons. Flush or wall mount.
