CENTRAL UNIT CONTROL

Code : **9430016**

Model : **SRG-120**

Description
The central control unit of the ALCAD NURSE CALL system is a small 1U server for 19" racks. It enables patient-nurse communication by receiving calls made from the different room posts (CHC-040) and sending them to the appropriate room posts. It manages the work of the healthcare team of the hospital or nursing home by not only recording in its database all the information related to calls made by patients and residents, but also by saving details of the treatment given to patients and residents by the healthcare team. It adds greater mobility to classic nursing systems by offering the possibility of adding wireless DECT telephones as control posts that can be used by the nurses or doctors to answer calls from patients directly, regardless of their location.
The SRG-120 central control unit allows the management of 1 to 199 terminals.

CODE	9430016
MODEL	SRG-120
PROCESSOR	Intel(R) Core(TM) i3-8100 CPU @ 3.60GHz
MEMORY	8 GB Ram
STORAGE CONTROLLERS	1TB HDD
DIMENSIONS	420mm x 360mm x 45mm
I/O & PORTS	2x 1 GbE port
OPERATING TEMPERATURE	-10°C - 55°C
