ACTIVATOR 5M

Code : **9430069**

Model : **CER-012**

Description
Activating device responsible for emitting an electromagnetic signal to the localization tags worn by the monitored patients (CER-030), indicating that they are within a supervised area. This prompts the tag to send an alarm signal to the control device and to the system.
As long as the tag (CER-030) remains within the activator's operating range, the activator will continuously keep it active until the wanderer leaves the area.

The CER-012 activator must always be installed close to the area to be monitored (door, corridor, etc.), generally above the door to be controlled, using the included wall/ceiling mounting bracket. The CER-012 has a maximum activation range of 3 meters.
