LICENSE SERVER - LIVERO

Code : **9440105**

Model : **SWG-205**

LIVERO is ALCAD's 100% IP platform designed for integration in tertiary-use buildings, where the volume of daily visitors is very high. In these cases, and to guarantee the safety of users, it is essential to have a robust system that allows the emergency call to be reliably transferred to security personnel. LIVERO includes an intercommunication point in each refuge zone, warning handles in bathrooms/changing rooms and lights for common areas or bathrooms/changing rooms. All this centralized and managed from a single or multiple control posts, assigned by areas according to need. In turn, for a correct management of the accesses in the different points of the building, ALCAD offers a manager that allows to control the different doors and their status by means of IP controllers.
