

903 MAST AMPLIFIERS

AMP GROUPS UHF-UHF-VHF/FM MAST

Code : **9030048**

Model : **AM-309**

Description

Configurable amplifiers for masts. The UHF inputs can be configured by adding low pass, high pass, band pass, monochannel, band rejection and channel rejection filters. The filters are installed during the factory manufacturing process and cannot be readjusted by the user. The attenuator located at each input makes it possible to control the gain to obtain an output with all the bands equalised.

Applications

Individual digital and analogue terrestrial TV installations which require an amplifier adapted to the specific needs of the area. The interference from undesired channels can be avoided through the use of the built-in filters. The type of filter and the initial and final channels should be specified in the order.

Characteristics

Shielded zamak chassis, covered by an ABS plastic box for outdoor use. Fixed to the mast by means of a polyamide clamp. F-type connectors.

Accessories

9030086 AL-100 +24 power supply unit. 9120039 CM-004 Male F connector for Ø6.6 mm coaxial. 9080023 MC-302 Male F connector for RG-6 coaxial, Ø7.0 mm.
